

PREVENTING THE UNKNOWN

Achieve proactive security and enhance your existing solution with Thor Foresight Enterprise

Choose the cost-saving solution for patch and software deployment that will eliminate vulnerabilities

85% of malware today uses outdated 3rd-party software to compromise the company's network and endpoints.

Thor Foresight has unique threat prevention capabilities to stop:

🚫 Ransomware 🚫 Data leakage 🚫 APTs 🚫 Exploits

Achieve proactive security and maximize compliance

For most IT administrators, it is a hard task to locate the specific users that pose the biggest risk on a daily basis.

Rely on Thor X-ploit Resilience, an unique feature included in Thor Foresight Enterprise, to automatically patch security-critical 3rd-party software on all your servers and endpoints, even when your users are on the go.

Darklayer Guard, the unique endpoint traffic-scanning solution included in Thor Foresight Enterprise, makes it possible to map out the critical endpoints in your environment.

This allows you to properly educate employees and mitigate the risk of getting compromised.

Reinforce your existing security suite with powerful anti-malware tools

Thor Foresight's VectorN Detection is a unique way to detect sophisticated malware across multiple attack vectors.

Using behavioral analysis of your incoming and outgoing traffic will prevent and mitigate the attacks that cannot be detected by reactive solutions like antivirus.

Thor Foresight is the first component of the Thor Premium Enterprise package.
Thor Vigilance, our antivirus with 100.00% detection, completes it to offer multiple security layers.
